FERC Project No. 10855

Ms. Kimberly D. Bose, Secretary
The Federal Energy Regulatory Commission
888 First Street NE
Washington, DC 20426

Dear Secretary Bose:

Dead River Hydroelectric Project No. 10855 Wildlife Management Plan Article 411

As per the February 17, 2005 Federal Energy Regulatory Commission (FERC) order modifying and approving the Dead River Hydroelectric Project Wildlife Management Plan, UPPCO is submitting an update on the Wildlife Management Plan and Bald Eagle Management results. In addition, UPPCO is providing the results of the three years of wildlife success surveys.

Wildlife Management Plan

The Wildlife Management Plan was discussed during the annual resource agency meetings held on February 12, 2009 and March 24, 2010. During the 2009 resource agency meeting the distribution of the wildlife structures to adjacent property owners and information on nesting success was discussed. During the 2010 resource agency meeting, UPPCO discussed their intent to provide information to justify the discontinuing of maintenance on certain species nesting structures as outlined in the Wildlife Management Plan.

UPPCO has been providing postcards and letters to the Dead River Campers Association (DRCA) and the McClure Basin Owners Association (MBOA) containing information on proper maintenance of wood duck and owl nesting boxes and how to provide success information to UPPCO. The letters and postcards were provided to the DRCA on April 18, 2009 and April 17, 2010 and to the MBOA on November 18, 2009 and March 13, 2010.

On November 18, 2009 UPPCO provided watershed improvement brochures specifically created for the MBOA and Dead River Campers, Inc (DRCI), respectively. The brochures included information on existing wildlife habitat improvements on the reservoirs, information on the proper installation of nesting boxes and the importance of maintaining woody debris on the lakeshore. Per a request by the DRCA, UPPCO provided 300 additional brochures to the DRCA to be distributed to their members during their annual spring celebration.

UPPCO completed annual wildlife structure success surveys and maintenance activities at the Dead River Hydroelectric Project. No wildlife nesting activity was observed from the various structures at the Hoist or Silver Lake reservoir. For the second straight year, UPPCO did not have bluebird or kestrel nesting boxes installed at the McClure reservoir. These structures were intentionally removed in 2009 in order to accommodate the expansion of the McClure penstock

corridor. The project is near completion, and the bluebird and kestrel nesting boxes will be re-installed in 2011.

Bald Eagle Management

A survey for Bald Eagle nests within the Dead River Project was completed in conjunction with the invasive species surveys in 2010. A survey of all three reservoirs was conducted August 4th through August 5th, 2010. One bald eagle nest was again observed at the Hoist Reservoir. Additionally, information provided by the U.S. Fish & Wildlife Service (FWS) on December 12, 2010 confirmed that the nest located at the Hoist Reservoir was active in 2010, producing 2 eaglets.

On April 13, 2010, UPPCO provided information concerning the bald eagle nest location and the FWS National Bald Eagle Management guidelines to the property owner (DRCI). On August 4, 2010, UPPCO representatives met with the DRCI. The bald eagle nest location was discussed and UPPCO asked if additional information would be needed concerning the nest or questions the DRCI may have concerning management. DRCI indicated that the information provided was sufficient and UPPCO would be contacted if questions arise. A copy of the letter provided to DRCI is included as Appendix A.

Three-Year Survey Results

The initial wildlife nest structure surveys were completed either in 2007 or 2008, depending on when the structures were to be installed per the structure installation schedule. Since that time, the nesting structure success has remained extremely low, with less than 10% success observed for every target species. A breakdown of the survey results is provided as follows:

Owl Nesting Boxes

Owl nesting boxes located at Silver Lake have been surveyed since 2008. In three years of surveying, no owl species have been observed using the nesting structures. No activity was reported from the owl nesting structures in 2008 and 2010. In 2009, leaves associated with squirrel nests were observed in one structure. Squirrel is not a target species. After three years of surveying, no successful owl nesting box was observed. The total success for each year of surveying is less than 10%.

Bat House

A total of three bat houses are located at the project, one bat house at each reservoir. Bat house surveys started in 2007 for the McClure Reservoir and in 2008 for Hoist and Silver Lake. In each of the surveys, no bat activity was reported. After three years of surveying, no successful bat house was observed. The total success for each year of surveying is less than 10%.

Purple Martin House

One purple martin house is located at the Hoist reservoir. Surveying of the purple martin house started in 2008. No activity has been observed in three years of surveys. The total success for each year of surveying is less than 10%.

Secretary Bose
January 21, 2011
Page 3 of 3

Kestrel and Bluebird Nesting Boxes

Kestrel and bluebird nesting boxes have been surveyed annually at the Hoist and Silver Lake reservoirs since 2007. However, in 2009 kestrel nesting boxes were removed to accommodate the expansion of the McClure Penstock corridor. UPPCO will continue to monitor these wildlife nest structures until three years of surveys have been conducted.

Remaining Wildlife Nesting Structures

Success surveys were also completed for the wood duck nesting boxes located at the Silver Lake reservoir and mallard nesting cones and loon nesting platforms at both the Silver Lake and Hoist reservoirs beginning in 2007. None of the surveys revealed successful nesting by the target species.

Conclusion

Per the order modifying and approving Wildlife Management Plan, UPPCO is discontinuing the maintenance of nesting structures for owl nesting box, bat house and purple martin houses. The kestrel nesting boxes and bluebird nesting boxes will be surveyed until a total of three surveys has been conducted.

A summary of the wildlife nesting structure surveys is provided as Appendix B. The annual survey results from 2007 through 2010 are also included. It should be noted that in the annual survey results, any reference to old nest, leaves and debris refers to squirrel use and not to a target wildlife species.

Appendix C includes documentation of consultation with the Resource Agencies. No comments were received from the resource agencies.

Should you have any questions relative to this material, please do not hesitate to contact Jamie Nuthals at (920) 433-1460.

Sincerely,

Terry P. Jensky

RE: Bald Eagle Nest located on Dead River Campers, Inc. Property

Dear Mr. Dishnow:

As per the Dead River Hydroelectric Project Wildlife Management Plan, Upper Peninsula Power Company (UPPCO) is to provide the a site location figure of any bald eagle nest observed on land not owned by UPPCO within the project boundary to the property owner.

During the annual summer surveys, UPPCO observed a bald eagle nest on Dead River Campers, Inc. property. Figure 1 includes the bald eagle location.

Additionally, UPPCO is providing the U.S Fish & Wildlife Service (FWS) National Bald Eagle Management Guidelines for your reference.

If you have any questions concerning the information provided, please contact me at your earliest convenience.

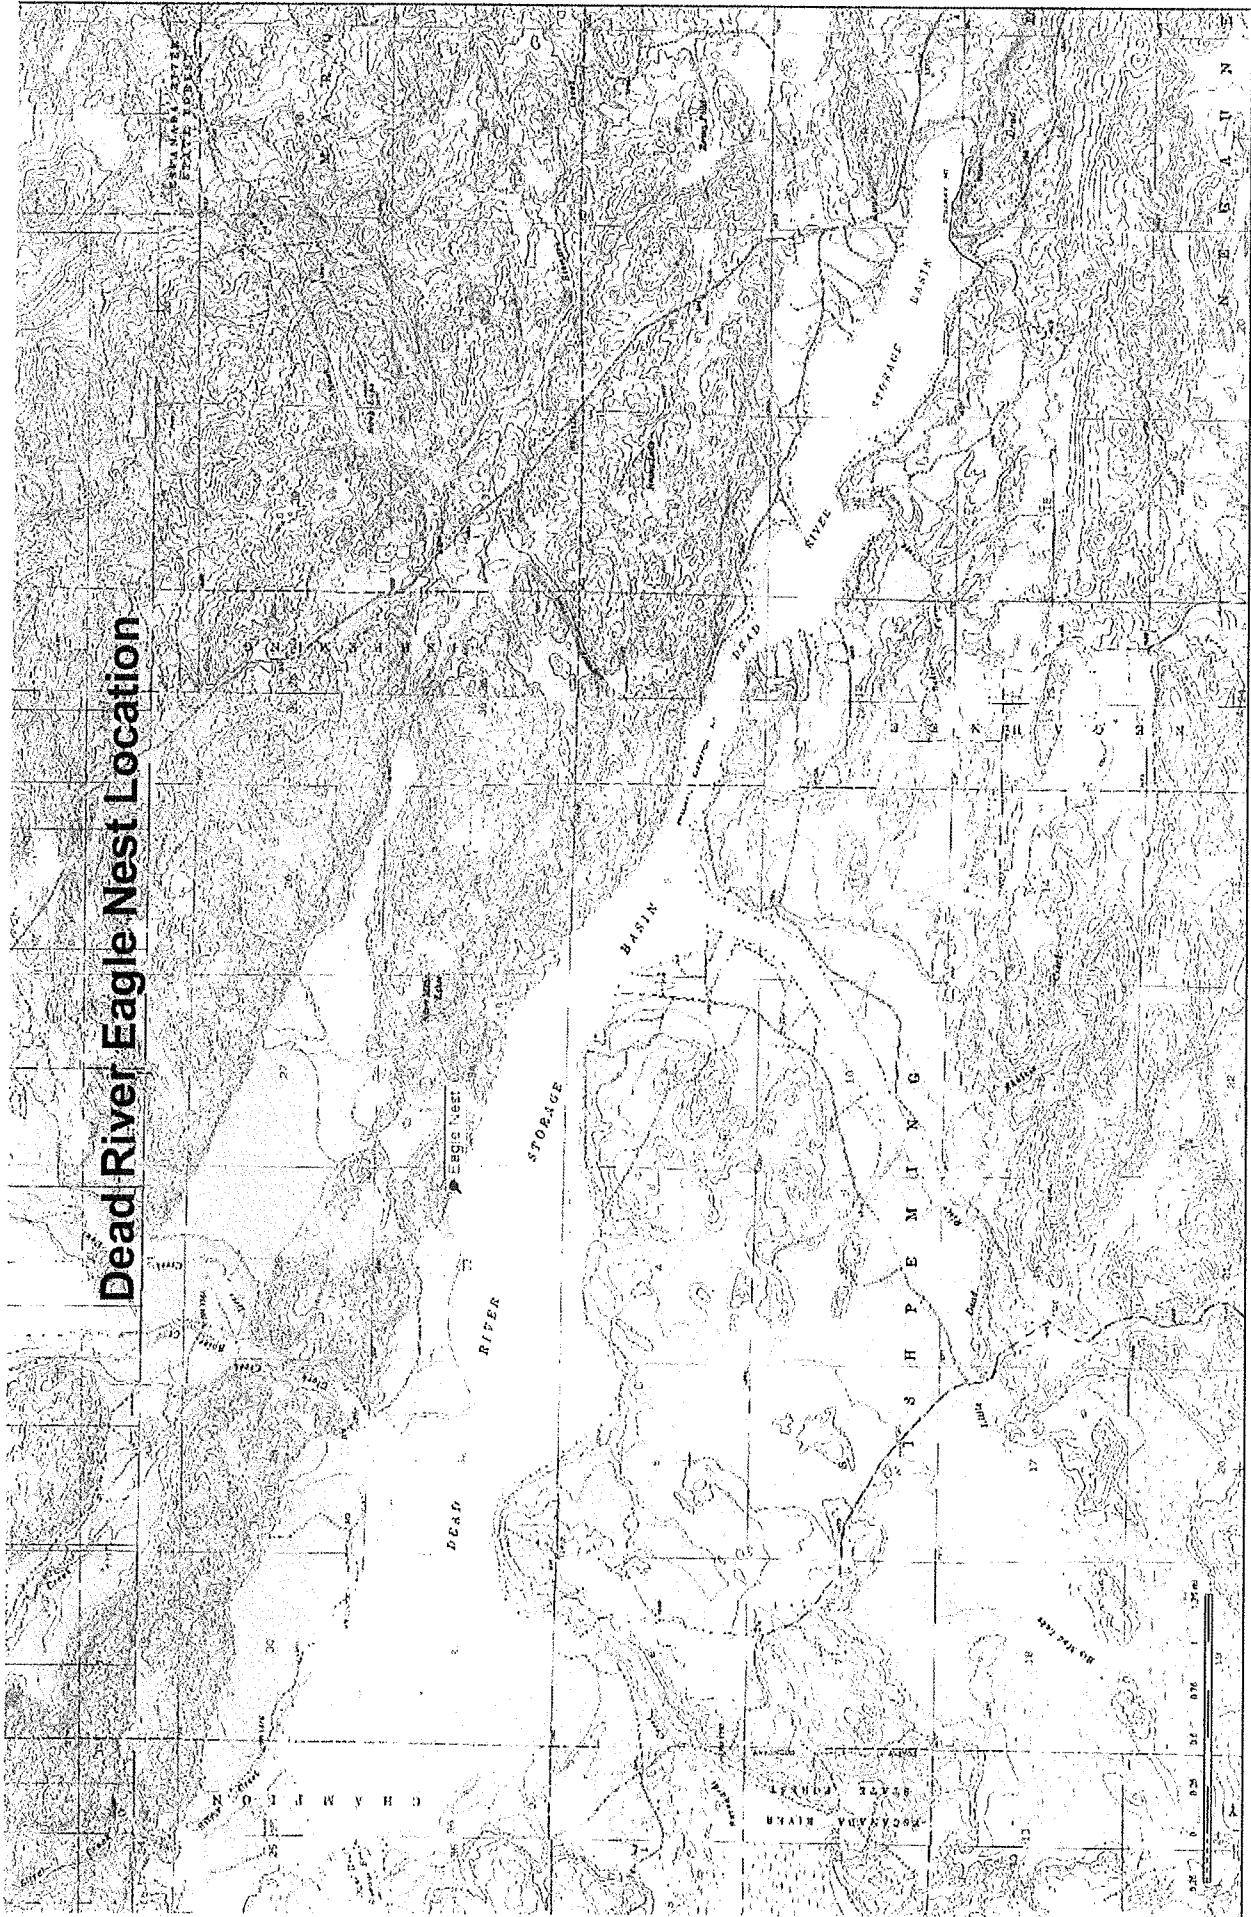

Sincerely,

A handwritten signature in black ink, appearing to read "J. Nuthals", written in a cursive style.

Marquette, MI 49855

Dear Ms. Deloria – Sheffield:

Dead River Hydroelectric Project No. 10855 Wildlife Management Plan Article 411

As per the February 17, 2005 Federal Energy Regulatory Commission (FERC) order modifying and approving the Dead River Hydroelectric Project Wildlife Management Plan, UPPCO is submitting an update on the wildlife management plan and bald eagle management results. In addition, UPPCO is providing the results of the three years wildlife success surveys.

Wildlife Management Plan

The wildlife management plan was discussed during the annual resource agency meetings held on February 12, 2009 and March 24, 2010. During the 2009 resource agency meeting the distribution of the wildlife structures to adjacent property owners and information on nesting success was discussed. During the 2010 resource agency meeting, UPPCO discussed their intent to provide information to justify the discontinuing of maintenance on certain species nesting structures.

UPPCO has been providing postcards and letters to the Dead River Campers Association (DRCA) and the McClure Basin Owners Association (MBOA) containing information on proper maintenance of wood duck and owl nesting boxes and how to provide success information to UPPCO. The letters and postcards were provided to the DRCA on April 18, 2009 and April 17, 2010 and to the MBOA on November 18, 2009 and March 13, 2010.

On November 18, 2009 UPPCO provided watershed improvement brochures specifically created for the MBOA and Dead River Campers, Inc (DRCI), respectively. The brochures included information on existing wildlife habitat improvements on the reservoirs, information on the proper installation of nesting boxes and the importance of maintaining woody debris on the lakeshore. Per a request by the DRCA, UPPCO provided 300 additional brochures to the DRCA to be distributed to their members during their annual spring celebration.

UPPCO completed annual wildlife structure success surveys and maintenance activities at the Dead River Hydroelectric Project. No wildlife nesting activity was observed from the various structures at the Hoist or Silver Lake reservoir. For the second straight year, UPPCO did not

Ms. Deloria – Sheffield
December 21, 2010
Page 2 of 3

have bluebird or kestrel nesting boxes installed at the McClure reservoir. These structures were intentionally removed in 2009 in order to accommodate the expansion of the McClure penstock corridor. The project is near completion, and the bluebird and kestrel nesting boxes will be re-installed in 2011.

Bald Eagle Management

A survey for Bald Eagle nests within the Dead River Project was completed in conjunction with the invasive species surveys in 2010. A survey of all three reservoirs was conducted August 4th through August 5th, 2010. One bald eagle nest was again observed at the Hoist Reservoir. Additionally, information provided by the U.S. Fish & Wildlife Service (FWS) on December 12, 2010 confirmed that the nest located at the Hoist Reservoir was active in 2010, producing 2 eaglets.

On April 13, 2010, UPPCO provided information concerning the bald eagle nest location and the FWS National Bald Eagle Management guidelines to the property owner (DRCI). On August 4, 2010, UPPCO representatives met with the DRCI. The bald eagle nest location was discussed and UPPCO asked if additional information would be needed concerning the nest or questions the DRCI may have concerning management. DRCI indicated that the information provided was sufficient and UPPCO would be contacted if questions arise. A copy of the letter provided to DRCI is included as Appendix A.

Three Year Survey Results

The initial wildlife nest structure surveys were completed either in 2007 or 2008, depending on when the structures were to be installed per the wildlife installation schedule. Since that time, the nesting structure success has remained extremely low, with less than 10% success observed for every target species. A breakdown of the survey results is provided as follows:

Owl Nesting Boxes

Owl nesting boxes located at Silver Lake have been surveyed since 2008. In three years of surveying, no owl species have been observed using the nesting structures. No activity was reported from the owl nesting structures in 2008 and 2010. In 2009, leaves associated with squirrel nests were observed in one structure. Squirrel is not a target species. After three years of surveying, no successful owl nesting box was observed. The total success for each year of surveying is less than 10%.

Bat House

A total of three bat houses are located at the project, one bat house at each reservoir. Bat house surveys started in 2007 for the McClure Reservoir and in 2008 for Hoist and Silver Lake. In each of the surveys, no bat activity was reported. After three years of surveying, no successful bat house was observed. The total success for each year of surveying is less than 10%.

Ms. Deloria – Sheffield
December 21, 2010
Page 3 of 3

Purple Martin House

One purple martin house is located at the Hoist reservoir. Surveying of the purple martin house started in 2008. No activity has been observed in three years of surveys. The total success for each year of surveying is less than 10%.

Kestrel and Bluebird Nesting Boxes

Kestrel and bluebird nesting boxes have been surveyed annually at the Hoist and Silver Lake reservoirs since 2007. However, in 2009 kestrel nesting boxes were removed to accommodate the expansion of the McClure Penstock corridor. UPPCO will continue to monitor these wildlife nest structures until three years of surveys have been conducted.

Remaining Wildlife Nesting Structures

Success surveys were also completed for the wood duck nesting boxes located at the Silver Lake reservoir and mallard nesting cones and loon nesting platforms at both the Silver Lake and Hoist reservoirs beginning in 2007. None of the surveys revealed successful nesting by the target species.

Conclusion

Per the order modifying and approving Wildlife Management Plan, UPPCO is discontinuing the maintenance of nesting structures for owl nesting box, bat house and purple martin houses. The kestrel nesting boxes and bluebird nesting boxes will be surveyed until a total of three surveys has been conducted.

A summary of the wildlife nesting structure surveys is provided as Appendix B. The annual survey results from 2007 through 2010 are also included. It should be noted that in the annual survey results, any reference to old nest, leaves and debris refers to squirrel use and not to a target wildlife species.

Please provide questions or comment within thirty (30) days of receiving this information.
