Marquette Chosen As Center For New U.P. Health Planning Unit

Ascent to be based in Marquette with headquarters on the third floor of the Center Building.

Marquette's Health Planning Unit will be centered in the Center Building. The unit will be staffed by health professionals and will be responsible for developing and implementing a health planning strategy for the Upper Peninsula.

Other health planning units will be established in Houghton and Sault Ste. Marie.

The Marquette unit will focus on health needs assessment, resource allocation, and community health improvement initiatives. The unit will work closely with local health organizations, including hospitals, clinics, and public health agencies, to address identified health issues and improve access to care.

The planning unit aims to ensure that health care services are adequately provided and accessible to all residents of the Upper Peninsula, particularly those in rural and underserved areas.

The Marquette unit's establishment marks a significant step in the region's efforts to improve health care delivery and promote health equity.

Investors Stock Fund
You can buy it for $20 a month.

Investors Stock Fund is a mutual fund consisting of common stocks in more than 120 U.S. corporations. It is designed to give you long-term capital gains and reasonable income. Its annual expenses are estimated at $50,000.

FOUR TIMES FEATURE
TRIPLE FEATURE CHILLS! THRILLS! DANA ANDREWS IN "THE FROZEN DEAD" OPENS WEDNESDAY

The Dead River may be closed to smelt dipping if it is found that salmon spawning grounds are endangered.

The smelt fishing season on the Dead River is scheduled to begin on April 30. However, if salmon spawning grounds are found to be at risk due to smelt fishing activities, the season may be closed or restricted.

The Dead River is an important spawning ground for salmon populations in the region.

The decision to close or restrict the smelt fishing season will be based on scientific assessments and consultations with stakeholders, including indigenous communities and local fishing groups.

The purpose of these assessments is to ensure the sustainability of salmon populations and the long-term health of the river ecosystem.

The smelt fishing season is expected to run until May 30, but the indefinite closure of the season will depend on the results of the assessments.

The Department of Natural Resources will provide updates on the situation and the status of the smelt fishing season.
